Class 2 Exit Ticket Bank: Variables & Data Types

Course: Introduction to Python | Instructor Assessment Reference

Instructions: *Locate your Roster Number (Student #1 to #30) and answer the 3 questions corresponding to your assigned Set. Write your code or answers clearly on paper or execute them in your Python console.*

SET #1 (Student #1)

Q1 [Assignment]: What is the final value of apples?
apples = 5
apples = apples + 3

Q2 [Data Types]: What is the data type of "15.5" in Python?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Age: " + 18)

SET #2 (Student #2)

Q1 [Assignment]: What is the final value of score?
score = 10
score = score - 4

Q2 [Data Types]: What is the data type of the expression 7 / 2 in Python 3?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Total: " + 100)

SET #3 (Student #3)

Q1 [Assignment]: What is the final value of items?
items = 4
items = items * 2

Q2 [Data Types]: What is the data type of True in Python?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Price: $" + 49.99)

SET #4 (Student #4)

Q1 [Assignment]: What is the final value of count?
count = 12
count = count / 3

Q2 [Data Types]: What is the data type of 42 (without quotes)?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Result: " + 10.0)

SET #5 (Student #5)

Q1 [Assignment]: What is the final value of x?
x = 7
x = x + 1

Q2 [Data Types]: Which of these is an invalid variable name: user_name, 2nd_place, or _total?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("User " + 5 + " logged in")

SET #6 (Student #6)

Q1 [Assignment]: What is the final value of p?
p = 20
p = p - 5

Q2 [Data Types]: What is the data type of the result of 3 + 2.0?

Q3 [Debugging & Casting]: Convert the string "25" to an integer and store it in variable num.

SET #7 (Student #7)

Q1 [Assignment]: What is the final value of m?
m = 3
m = m ** 2

Q2 [Data Types]: What is the data type of "False" (with quotes)?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Level: " + 3)

SET #8 (Student #8)

Q1 [Assignment]: What is the final value of y?
y = 15
y = y % 4

Q2 [Data Types]: What is the data type of 0.0?

Q3 [Debugging & Casting]: Convert the float 9.85 to an integer using int(). What is the value?

SET #9 (Student #9)

Q1 [Assignment]: What is the final value of n?
n = 2
n = n + n

Q2 [Data Types]: Why does a + x = b cause a SyntaxError in Python?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Distance: " + 50 + " km")

SET #10 (Student #10)

Q1 [Assignment]: What is the final value of k?
k = 10
k = k * 0

Q2 [Data Types]: What does the expression "Python " * 3 evaluate to?

Q3 [Debugging & Casting]: Write a line of code to ask the user for their age using input() and convert it to an integer.

SET #11 (Student #11)

Q1 [Assignment]: What is the final value of a?
a = 8
a = a + 2

Q2 [Data Types]: What is the data type of type(100)?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Temperature: " + 24)

SET #12 (Student #12)

Q1 [Assignment]: What is the final value of b?
b = 14
b = b / 2

Q2 [Data Types]: Is my-variable a valid variable name in Python? Why?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Year: " + 2026)

SET #13 (Student #13)

Q1 [Assignment]: What is the final value of val?
val = 6
val = val * 3

Q2 [Data Types]: What is the data type of "0.0"?

Q3 [Debugging & Casting]: Convert the string "10.5" to a float and store it in variable rate.

SET #14 (Student #14)

Q1 [Assignment]: What is the final value of c?
c = 15
c = c - 10

Q2 [Data Types]: What is the data type of 10 > 5?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Grade: " + 95)

SET #15 (Student #15)

Q1 [Assignment]: What is the final value of w?
w = 9
w = w // 2

Q2 [Data Types]: Which variable name follows PEP 8 Python standards: StudentAge or student_age?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Speed: " + 60.5 + " mph")

SET #16 (Student #16)

Q1 [Assignment]: What is the final value of r?
r = 5
r = r + 10

Q2 [Data Types]: What is the data type of None in Python?

Q3 [Debugging & Casting]: What is the result of int(4.9)?

SET #17 (Student #17)

Q1 [Assignment]: What is the final value of z?
z = 18
z = z % 5

Q2 [Data Types]: What does "2" + "3" evaluate to in Python?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Height: " + 1.75 + " m")

SET #18 (Student #18)

Q1 [Assignment]: What is the final value of d?
d = 2
d = d ** 3

Q2 [Data Types]: Why can't you use print as a variable name in Spyder/VS Code?

Q3 [Debugging & Casting]: Convert input from input("Hours: ") to a float.

SET #19 (Student #19)

Q1 [Assignment]: What is the final value of x?
x = 5
x = x * 4

Q2 [Data Types]: What is the type of 3.14159?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Item count: " + 12)

SET #20 (Student #20)

Q1 [Assignment]: What is the final value of y?
y = 25
y = y - 10

Q2 [Data Types]: What is the data type of False?

Q3 [Debugging & Casting]: What is the result of str(100) + "$"?

SET #21 (Student #21)

Q1 [Assignment]: What is the final value of m?
m = 16
m = m / 4

Q2 [Data Types]: Is _status a valid Python variable name?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Balance: " + 250.0)

SET #22 (Student #22)

Q1 [Assignment]: What is the final value of g?
g = 3
g = g + 7

Q2 [Data Types]: What is the data type of "Hello World"?

Q3 [Debugging & Casting]: What is the result of int(7.2) + int(2.8)?

SET #23 (Student #23)

Q1 [Assignment]: What is the final value of h?
h = 9
h = h % 2

Q2 [Data Types]: What is the data type of 5.0?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Error code: " + 404)

SET #24 (Student #24)

Q1 [Assignment]: What is the final value of v?
v = 4
v = v ** 2

Q2 [Data Types]: Why are Age and age considered two different variables in Python?

Q3 [Debugging & Casting]: Convert the string "88" to an integer.

SET #25 (Student #25)

Q1 [Assignment]: What is the final value of q?
q = 11
q = q - 3

Q2 [Data Types]: What is the data type of 2 * 4.0?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Version: " + 3.1)

SET #26 (Student #26)

Q1 [Assignment]: What is the final value of s?
s = 2
s = s + 8

Q2 [Data Types]: What does "Go" + "!" * 3 evaluate to?

Q3 [Debugging & Casting]: What is the result of float(5)?

SET #27 (Student #27)

Q1 [Assignment]: What is the final value of u?
u = 14
u = u // 3

Q2 [Data Types]: What is the data type of "True"?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Quantity: " + 15)

SET #28 (Student #28)

Q1 [Assignment]: What is the final value of t?
t = 7
t = t * 2

Q2 [Data Types]: What is the data type of -100?

Q3 [Debugging & Casting]: Convert input input("Minutes: ") to an integer.

SET #29 (Student #29)

Q1 [Assignment]: What is the final value of w?
w = 30
w = w / 5

Q2 [Data Types]: Is total_sum a valid Python variable name?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Points: " + 50)

SET #30 (Student #30)

Q1 [Assignment]: What is the final value of z?
z = 10
z = z ** 2

Q2 [Data Types]: What is the data type of 4 / 2 in Python 3?

Q3 [Debugging & Casting]: Fix the line to prevent a TypeError:
print("Final score: " + 100)
